PROFILE

Senior Flutter engineer with 6+ years shipping cross-platform products and 3 years leading a delivery team. Currently technical lead on a three-app realtime transport platform — background GPS tracking, offline-first sync and WebSocket live maps — alongside a bilingual marketplace live on both stores. 42 apps published to Google Play and the App Store. Works end to end: architecture, state management, API integration, CI/CD and store release, with a bias toward clean architecture and code the next developer can maintain.

CORE SKILLS

Flutter & Dart BLoC / Cubit, Riverpod, Provider, freezed, injectable / get_it, go_router, fpdart, custom animations, responsive layouts, Arabic/English localization and RTL

Architecture & Quality Clean Architecture, SOLID, TDD, unit and widget testing, modularization, code review

Backend & Realtime REST, GraphQL, WebSockets, Firebase (Auth, Firestore, Cloud Messaging, Crashlytics, Analytics), payment gateway integration

Location & Offline Background geolocation, Mapbox, Google Maps, flutter_map with FMTC offline tile caching, offline-first sync and outbox pattern

On-device ML TensorFlow Lite (FaceNet) for on-device inference

Release & Delivery CI/CD (GitHub Actions, Azure Pipelines, Fastlane), Shorebird code-push, build flavors, Google Play Console, App Store Connect, Sentry, Git, Agile

EXPERIENCE

Senior Flutter Engineer | Raise Right — Cairo, Egypt (Remote)
Feb 2026 – Present

- Technical lead on a three-app school transport platform (Driver, Supervisor, Parent) built from scratch on Clean Architecture with BLoC/Cubit, freezed unions, injectable DI and go_router.
- Shipped background GPS tracking with batched HTTP uploads and an offline outbox, streaming live driver position to parent and supervisor maps over a WebSocket connection.
- Built offline-first mapping with flutter_map and FMTC tile caching over server-precomputed route geometry, removing runtime routing API calls and their per-request cost.
- Integrated Shorebird code-push across three build flavors on a live production app (~500 active users, both stores), cutting hotfix turnaround from a store review cycle to minutes.
- Delivered features for a bilingual (Arabic/English, RTL) education marketplace on GraphQL, including deep-linked payment flows and a wallet and cashback journey.
- Prototyped on-device face verification with a FaceNet TFLite model for identity checks without a network round trip.

Flutter Team Lead | Baramjk — Kuwait (Remote)
Mar 2023 – Feb 2026

- Led the Flutter team across concurrent client apps, owning architecture decisions, code review standards and the release calendar.
- Delivered large-scale e-commerce and gaming apps end to end — first build through store review, launch and post-release maintenance on Google Play and the App Store.
- Built and maintained CI/CD pipelines with GitHub Actions, Azure Pipelines and Fastlane, automating build, test, code signing and deployment to TestFlight and Google Play.
- Standardised the team on a shared BLoC and clean-architecture baseline, so features move between developers without a rewrite.
- Mentored junior and mid-level developers through code review and pairing, and ran the team Git branching and delivery workflow.

Flutter Developer | Spark Systems — Giza, Egypt
Jan 2020 – Mar 2023

- Built and maintained retail and logistics apps for Android and iOS, including the Stock Client ordering app and the Stock Delivery driver app.
- Improved app responsiveness through API pagination, image caching and reduced widget rebuilds.
- Integrated REST APIs and Firebase — authentication, push notifications and crash reporting — across production apps.

Data Engineer, Oil & Gas | Halliburton · Oilserv · DHI
2008 – 2019

- Managed and analysed large-scale drilling and production datasets on multinational projects across eight countries.

SELECTED PROJECTS

- **Rolli —** school transport platform — three Flutter apps (Driver, Supervisor, Parent) with background GPS, WebSocket live tracking, offline map tiles and offline-first sync.
- **EduMarket —** bilingual Arabic/English education marketplace on GraphQL, live on both stores with Shorebird code-push across three flavors.
- **Sphoto —** celebrity booking marketplace with scheduling, booking flow and payment integration.
- **Ghaslah / Ghaslah Admin —** on-demand car wash with a customer booking app and an admin console for dispatch and operations.
- **Stock Client & Stock Delivery —** grocery ordering app paired with a driver delivery app using Google Maps routing.
- **E-commerce suite —** Almulla Farms, Montajat, Prestige, Organz, Melocanna — catalogue, cart, checkout, payment gateway and order tracking.
- **Trivia & gaming —** Falta, Nuqat, Thabbit — real-time scoring and question delivery.

Full catalogue of 42 published apps: ahclever2006.github.io/clever_portfolio

EDUCATION

B.Sc. in Chemistry & Geology — Cairo University, 2006
