PROFILE

Flutter engineer with 6+ years building cross-platform mobile products and 3 years leading a delivery team. 42 apps published to Google Play and the App Store across e-commerce, booking, trivia and business. Works end to end — architecture, state management, API and Firebase integration, store release and post-launch maintenance — with a bias toward clean architecture and code the next developer can maintain. Prior 15-year career as an oilfield data engineer across eight countries.

CORE SKILLS

Flutter & Dart BLoC / Cubit, Provider, custom animations, responsive layouts, Arabic/English localization and RTL

Architecture & Quality Clean Architecture, SOLID, OOP, TDD, unit and widget testing, code review

Backend & Services RESTful APIs, Firebase (Auth, Firestore, Cloud Messaging, Crashlytics, Analytics), Google Maps, payment gateway integration

Release & Delivery CI/CD (GitHub Actions, Azure Pipelines, Fastlane), Google Play Console, App Store Connect, release management, Git, Trello, Agile

EXPERIENCE

Flutter Team Lead | Baramjk — Kuwait (Remote)

Mar 2023 – Present

- Lead the Flutter team across concurrent client apps, owning architecture decisions, code review standards and the release calendar.
- Deliver large-scale e-commerce and gaming apps end to end — first build through store review, launch and post-release maintenance on both Google Play and the App Store.
- Build and maintain CI/CD pipelines with GitHub Actions, Azure Pipelines and Fastlane — automating build, test, code signing and deployment to TestFlight and Google Play.
- Standardised the team on a shared BLoC and clean-architecture baseline, so features move between developers without a rewrite.
- Mentor junior and mid-level developers through code review and pairing, and run the team Git branching and Trello workflow.

Flutter Developer | Spark Systems — Giza, Egypt

Jan 2020 – Mar 2023

- Built and maintained retail and logistics apps for Android and iOS, including the Stock Client ordering app and Stock Delivery driver app.
- Improved app responsiveness through API pagination, image caching and reduced widget rebuilds.
- Integrated REST APIs and Firebase — authentication, push notifications and crash reporting — across production apps.

Data Engineer — Oil & Gas (earlier career) | Halliburton · Oilserv · DHI

Jun 2008 – 2019

- Designed, managed and analysed large oilfield datasets for drilling and production operations on multinational projects across Egypt, Qatar, Saudi Arabia, Spain, Ghana, Kuwait, Iraq and Malaysia.

SELECTED PROJECTS

- **Sphoto —** celebrity booking marketplace with scheduling, booking flow and payment integration.
- **Almulla Farms, Montajat, Prestige, Organz, Melocanna —** e-commerce — catalogue, cart, checkout, payment gateway and order tracking.
- **Falta, Nuqat, Thabbit —** trivia and gaming apps with real-time scoring and question delivery.
- **Ghaslah / Ghaslah Admin —** on-demand car wash — customer booking plus an admin console for dispatch and operations.
- **Slots / Slots Admin —** barbershop appointment booking with an owner-facing management console.
- **Stock Client & Stock Delivery —** grocery ordering app paired with a driver delivery app using Google Maps routing.
- **Amaken Misr —** places guide built on Google Maps with search and location discovery.
